Technology Stack

Date	5 July 2026
Team ID	xxxxxx
Project Name	Smart Lender
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Fill out the table below to detail the specific technologies chosen for each component of your architecture and provide a brief justification for your choice.

Technology Stack Details

S.No	**Architecture Component / Layer**	**Technology Chosen**	**Justification / Purpose**
1	Frontend / Client-Side (e.g., React, Angular, HTML/CSS)	React.js, HTML5, CSS3, JavaScript	[Explain why this was chosen (e.g., responsive design, component reusability)]

2	Backend / Server-Side (e.g.,Node.js, Python/Django, Java)	Python (Flask)	[Explain why this was chosen (e.g., fast processing, existing team expertise)]
3	Database / Data Storage (e.g., MySQL, MongoDB, PostgreSQL)	MySQL	[Explain why this was chosen (e.g., handles unstructured data, strong relational mapping)]
4	Cloud / Hosting / Deployment (e.g., AWS, Azure, Heroku, Docker)	AWS (EC2, S3) or Docker	Enables scalable deployment, secure storage, and easy application management.
5	Version Control & CI/CD	GitHub	Supports version control, collaboration among team members, and project backup.
6	Third-Party APIs / Other Tools (e.g., Stripe, Twilio, Google Maps)	Scikit-learn, Pandas, NumPy, Twilio SMS API, Email API	Scikit-learn is used for fraud detection, Pandas and NumPy for data processing, and Twilio/Email APIs for sending loan status notifications.
