Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/kandukurisindhureddy-bit/Smart-Lender
Programming Language(s)	Python, JavaScript, HTML5, CSS3
Framework(s) Used	Flask, React.js, Scikit-learn

Key Features Implemented	• User Registration and Login • Loan Application Submission • Document Upload and Verification • AI-Based Fraud Detection • Loan Eligibility Prediction • Loan Approval/Rejection • Admin Dashboard • Email/SMS Notifications
Pending / Incomplete Features	• Credit Bureau API Integration • Payment Gateway Integration • Advanced Analytics Dashboard
Setup / Run Instructions	1. Install Python and Node.js. 2. Install dependencies using <code>pip install -r requirements.txt</code> and <code>npm install</code>. 3. Configure the MySQL database. 4. Start the Flask backend using <code>python app.py</code>. 5. Start the React frontend using <code>npm start</code>. 6. Open <code>http://localhost:3000</code> in a web browser.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes(if uploaded to GitHub)

Additional Notes / Comments:

- The project follows a modular architecture with separate frontend, backend, machine learning, and database layers.
- The machine learning model evaluates applicant credibility and detects potential fraud to improve loan approval accuracy.
- The system is designed to be scalable, secure, and easy to maintain.
