

Project Executable Files

Date	5 July 2026
Team ID	
Project Name	Smart lender
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	Yes
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	No
7	APK / Executable binary (if applicable for mobile/desktop apps)	N/A
8	Dockerfile / Containerization config (if applicable)	No
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```
SMART_LENDER/  
|  
├── DataSet/  
|   └── loan_approval_dataset.csv  
|  
├── Flask/  
|   ├── static/  
|   |   └── css/  
|   |       └── input.css  
|   |  
|   └── templates/  
|       ├── home.html  
|       ├── input.html  
|       └── output.html  
|  
|   ├── app.py  
|   ├── model.pkl  
|   └── scaler.pkl  
|  
├── IBM/  
|  
├── Training/  
|  
├── notebook.ipynb  
|  
└── README.md
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not Deployed (Runs Locally on Flask: http://127.0.0.1:5000)
Login Credentials (Demo)	N/A (No Login Required)
Platform / Hosting Provider	Local Flask Development Server
Repository Link	https://github.com/kandukurisindhureddy-bit/Smart-Lender
Demo Video Link	https://drive.google.com/file/d/1HHOsnjY8IBCT0aMuS4f5_xAG2fcSPuX/view?usp=drivesdk

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites:

[Python 3.13 or above, Flask, NumPy, Scikit-learn (Version 1.5.2), Joblib, Pandas, Visual Studio Code (Recommended)]

Step 1: [Clone the GitHub repository]

```
git clone <Repository URL>
```

Step 2: [Navigate to the project folder]

```
cd SMART_LENDER
```

Step 3: [Install the required dependencies]

```
pip install -r requirements.txt
```

Step 4: [Navigate to the Flask application folder]

```
cd Flask
```

Step 5: [Run the Flask application]

```
python app.py
```

Step 6: [Open a web browser and visit]

```
http://127.0.0.1:5000
```

Step 7:

Click Start Prediction, enter the applicant details, and click Predict to view the loan approval result.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	The application uses a pre-trained machine learning model for prediction.	The model can be retrained with new datasets to improve accuracy.
2	Predictions depend on the quality and accuracy of the input data provided by the user.	Users should enter valid and accurate applicant details.
3	The application is currently designed to run on a local Flask server and is not deployed online	The project can be deployed on platforms such as Render, Railway, or PythonAnywhere for public access.
